<b>Team members</b>	Michael Brunner Patrick Sacher Clemens Strasser Claudia Vötter
<b>State topic</b>	Knowing the past
<b>Project abstract</b>	<p>With our website we want to arouse the interest of children in history by connecting fairy tales with historical stories and presenting them in a playful way. The navigation is done by a simple world map. The country in which the user is located is determined. Then it is suggested whether, and the user can visit the determined country or another. It is intended to provide an interesting overview of activities and their history. The user can find out more and more historical background by browsing through different stations. In addition, sagas or fairy tales on the respective topic can be listed to teach the children more about the history in this topic. Through small tasks at the end of each station, children can collect rewards and export their results as a certificate at the end. In order to offer a varied experience some parts of the website can be easily changed.</p> <p>German is used as the language for the content, so the target group is initially only children who speak or can read German. Translations into other languages are not planned in the project as this goes beyond the scope of the project. If the website is well received, we can still arrange a translation in the future.</p>
<b>USP</b>	<p>The target group of our website are parents who have children that can read and have access to the internet because the average age in which children learn how to read can vary. The problem we intend to solve is the circumstance that it is often hard for parents to motivate their children to get involved with history. But children are usually interested in new technology and tales. Therefore, we want to make historical facts accessible via a website as tales.</p> <p>The general benefits for our clients are:</p> <ol style="list-style-type: none"> <li>1. While the children are busy, their parents can focus on other duties</li> <li>2. It's more interactive than other websites</li> <li>3. No influence on children due to advertisements</li> </ol>

4. Children get a feeling for history through exploring a website
5. The website is accessible from nearly anywhere and there is no need to carry books around
6. The access to the website is free

Beside these general benefits there are also some specific benefits that set us apart from providers that offer similar websites:

1. <https://www.historyforkids.net/>
  - a. This site is unlike our site difficult for children to use because navigation without previous knowledge is very difficult and unintuitive.
  - b. This site contains way too much information and is therefore overwhelming for children.
  - c. Another disadvantage is that there is no login for parents and children.
2. <http://www.bbc.co.uk/history/forkids/>
  - a. This site is unlike our site difficult for children to use because navigation without previous knowledge is very difficult and unintuitive.
  - b. This site un has no interactive navigation with a map
  - c. Another disadvantage is that there is no login for parents and children.
3. <https://www.natgeokids.com/uk/category/kids-club/>
  - a. This site is unlike our site difficult for children to use because navigation without previous knowledge is very difficult and unintuitive.
  - b. Unlike on our site, this site has no interactive navigation with a map
  - c. Another disadvantage is that there is no login for parents and children.
  - d. This site contains sponsored links for children which is not our intent.

The promise to our clients is to wrap historical facts in a way that makes them accessible to children and fun to discover for them!

<b>User Stories</b>	<ol style="list-style-type: none"><li>1. As a parent I want to be able to register to the website, so I can have a personal account.</li><li>2. As a parent I want to be able to login with my credentials and choose one of my children to access the restricted area of their profile.</li><li>3. As a parent I want to be able to delete my account, so my data is erased from the database.</li><li>4. As a parent I want to export the results as a certificate for my child to give them a reward.</li><li>5. As an administrator I want to create a new story with content (text, images...) and quiz question at a specific coordinate on the map</li></ol>
